1)
$$\frac{n^2 + 1}{n^3 + 1} \sim \frac{n^2}{n^3} = \frac{1}{n} \to diverge$$

2)
$$\sin\left(\frac{1}{n^2}\right) \sim \frac{1}{n^2} \to converge$$

1)
$$\frac{n^{2} + 1}{n^{3} + 1} \sim \frac{n^{2}}{n^{3}} = \frac{1}{n} \rightarrow diverge$$
2)
$$\sin\left(\frac{1}{n^{2}}\right) \sim \frac{1}{n^{2}} \rightarrow converge$$
3)
$$\cos\left(\frac{1}{n^{2}}\right) = \cos\left(\frac{1}{inf}\right) = \cos(0) = 1 \rightarrow diverge$$
4)
$$\frac{\cos(\hat{u}n)}{\ln n}$$

$$-\frac{1}{\ln n} < \frac{\cos(\hat{u}n)}{\ln n} < \frac{1}{\ln n}$$
Primo: converge

$$\cos(un)$$

$$\frac{-\frac{\ln n}{\ln n}}{-\frac{1}{\ln n}} < \frac{\cos(\hat{\mathbf{u}}n)}{\ln n} < \frac{1}{\ln n}$$

Primo: converge

Secondo: converge

Siccome il secondo converge, e la nostra serie è definitivamente positiva Allora converge anche la nostra serie

5)
$$\frac{(2n+1)^n}{n^{2n}} = \sqrt[n]{\frac{(2n+1)^n}{n^{2n}}} = \frac{(2n+1)^{\frac{n}{n}}}{n^{\frac{2n}{n}}} = \frac{2n+1}{n^2} \sim \frac{n}{n^2} \to 0$$

6)
$$\frac{1}{2^{\ln n}} = \frac{1}{n^{\ln 2}}$$

7)
$$\frac{3n^2 + n}{\sqrt{n^5 + 2n + 1}} \sim \frac{3n^2}{\sqrt{n^5}} = \frac{3n^2}{\frac{5}{n^2}} = \frac{3}{\frac{1}{n^2}} \rightarrow diverge$$

Siccome 0 è < 1, per la legge della radice diverge

6)
$$\frac{1}{2^{\ln n}} = \frac{1}{n^{\ln 2}}$$
 $Ln(2) < 1$, quindi diverge

7) $\frac{3n^2 + n}{\sqrt{n^5 + 2n + 1}} \sim \frac{3n^2}{\sqrt{n^5}} = \frac{3n^2}{n^{\frac{1}{2}}} = \frac{3}{n^{\frac{1}{2}}} \rightarrow diverge$

8) $\frac{n}{2^n} = \frac{n+1}{2^{n+1}} * \frac{2^n}{n} = \frac{n+1}{2^n * 2} * \frac{2^n}{n} = \frac{n+1}{2} * \frac{1}{n} = \frac{n+1}{2n} \sim \frac{n}{2n} = \frac{1}{2} \rightarrow diverge$
